Hiring Team
ThemeGrill
Kathmandu, Nepal

Dear Hiring Team,

I was excited to see your opening for a Mid-Level WordPress Developer because it feels like a natural next step for me. I enjoy building with WordPress, but I am especially interested in moving deeper into product development--creating and improving themes and plugins that solve real problems for a large number of users.

I currently work as a Mid-Level WordPress and Laravel Developer at Codeilo Solutions. My day-to-day work includes building and maintaining WordPress and WooCommerce websites using PHP, JavaScript, and MySQL. I have worked on projects such as Oud Al Khoori, Perfect Pets UAE, ACube Industries, Wood Plus, Top Himalaya Guides, and Lucent Hire. These projects have taught me how to understand different business needs, find practical solutions, and deliver websites that are reliable and easy to use.

My experience is not limited to WordPress. I also developed a Laravel-based reporting platform for Prabhu Insurance with data imports, validation, filters, analytics, and CSV exports. Working on that system made me more confident in handling complex data, debugging difficult issues, and writing code with security and maintainability in mind.

What attracts me most to ThemeGrill is the opportunity to work on WordPress products used by people around the world. I would love to contribute the skills I already have in PHP, WordPress, WooCommerce, JavaScript, React, MySQL, REST APIs, and Git while learning from a team with strong experience in the WordPress ecosystem. I am comfortable working independently, but I also value honest feedback, clear communication, and sharing ideas with a team.

I know there is always more to learn as a developer, and that is something I genuinely enjoy. I would be grateful for the opportunity to bring my experience, curiosity, and problem-solving mindset to ThemeGrill and help build products that your users can depend on.

Thank you for taking the time to review my application. I would be happy to discuss my experience and projects with you.

Sincerely,

Mukesh Bhandari
